Convert pdf to excel format issues

Suppose you've downloaded a video from BitTorrent (that's okay, I won't tell) and you want to watch this video on your iPod, Android smartphone, or just your laptop. Depending on the format used to create the video (I'm looking at you, MKV), it can't play properly. That's why you need a converter, a utility that changes a video from one format to another. And I haven't yet found one that's easier to use (or has a better name) than Hamster Free Video Converter. Using it is literally a three-step process. First, select the file or files you want to convert, either by navigating a film u or by simply dragging the files to the Hamster window. Second, choose a generic output format (AVI, MPEG, or WMV, for example) or a specific device: Apple TV, iPod Touch, HTC phone, Zune, or whatever. (Hamster has presets for 16 different gadgets.) Finally, just click a button and sit back while the Hamster goes to work. It doesn't get much easier than that. One piece of advice: During setup, be sure to select the Customization option and disable the Bing and toolbar settings that the program wants to install. (I know that the developers are just trying to pay the bills, but I can't comply with this kind of sneakyware.) Note: When you buy something after clicking on links in our articles, we can earn a small commission. Read our affiliate link policy for more details. A common question I've got a lot these days is how to convert a PDF file to Microsoft Word format (doc), Excel format (xls), or JPG image format. Usually people want to know how to convert a file to PDF, but it's also nice to be able to convert back the other way. There are several ways to get your PDF file into any of these three formats, but I'm going to stick to the easiest methods that require the least amount of software. You can pretty much do all the conversions online these days using free tools. Convert PDF to JPG - Online Tools Go ZamZar.com and click the Select Files button to get started. Go ahead and select your PDF, and then click OK. Now, under step 2, select the file type you want to convert the PDF to. By default, this field determines the type of file you selected and gives you the list of possible output file types. For example, you can convert a PDF to a doc or docx file to a bmp, jpg, gif, or png file, and so on. In our case, we will choose JPG from the list. Now type your email address and click the Convert button. That's about it! You should get an email a few minutes with a link to your converted file. People have complained of significant delays between clicking Convert and actually getting an email. It seems the place is pretty busy and if you are trying to do a conversion at a very busy time, it can a few hours or even a day or two to get your converted file. If this is unacceptable, they have paid monthly plans, but unless you need to convert PDF files all the time, it's not worth buying. If you have problems with Zamzar, you can another free online PDF for JPG converter: the end result from both sides was very good, but then again, there is not much to be done to convert from a PDF to an image. It becomes more difficult when you have to go from PDF to Word or Excel format. Convert PDF to JPG - Desktop Software The first thing you need to do is download a free software (the only one I could find) that converts PDF documents to JPEG image format automatically. Go to the Omniformat download page and download both Omniformat v8.3 and the PDF995 app. You must download and install PDF995 first before installing Omniformat. After you have both programs installed, go to the start menu programs, locate the Software995 application pool, and click Omniformat. The only annoying thing about this program is that it requires you to see some ads for about 30 seconds! But it's better than paying \$20 or \$40 for a program just to do a simple conversion! It does pop up another instance of your browser window for the site for each of the sponsors, but it doesn't install any spyware on your computer (no popup ads). Once the program is loaded, you will see it has a section called Watch Folders and then a button at the bottom titled Start Monitoring and Single Pass. Basically the way it works is that you need to copy the PDF files you want to convert to JPG format to C:\omniformat\clock folder and then press Single Pass. The program will look in this folder and convert each page of each PDF to a separate JPG file. If you click Start Auditing, you can continue to drop PDFs to that folder, and the program automatically converts them to JPEG files as long as the program is open. Note that the program deletes the original PDF that it uses, so that's why you need to copy the PDF to the watch folder, not move it! You should now view your converted files as below. Another desktop application you can use is Free PDF for JPG, which also lets you convert a PDF to BMP, PNG and TIFF format. Convert PDF to Word Again, Zamzar does a great job with this conversion. Select your file, and then select DOC or DOCX from the list of options in step 2. Type your email address for step 3 and click Convert. You should receive an email within a few minutes with a download link to your converted file. I have tried this service on some rather complex PDF documents with text in multiple columns, multiple images, etc and have been very impressed with the conversion accuracy. Again, there are other ways to get your PDF in Word format. Here are a few good free online tools: If you want a desktop program for converting PDF to Word, you can download one here: PDF for Excel For Excel, it's the same process using Zamzar, which is great as long as they're not Previously, you had to convert the PDF to a TXT file and then import it into Excel and save it as an XLS or XLSX file. Now, however, it has been updated, and Zamzar fully supports the Excel format, so you can select it directly in step 2. Other than Zamzar, the other popular choice is from Nitro PDF software, which is also the same company behind pdftoword.com mentioned above: If you have a very complicated PDF file and formatting is not being converted properly using these free tools, you may need to invest in a commercial software package that can possibly do a better job. For example, there is Adobe Acrobat Pro DC, which will let you convert PDFs to Word, Excel and even PowerPoint files. Of course, it's pretty expensive (\$15 a month) and probably only worth it if your IT department bill. With Excel's spreadsheet power and Word's processor magic, they're a power duo to create projects. Although there is no direct conversion method, there are a few ways you can do this if you need to convert from Excel to a Word document. Instructions in this article apply to Excel and Word 2019, 2016, and Excel and Word for Microsoft 365. Additionally, while Excel has an export setting, there is no original way to export to Word from Excel. Instead, use one of the methods described here to move data from an Excel document to a Word document. The first method is the simplest, and you are probably already aware of it. You can easily convert your work from Excel to Word by copying and pasting. To start, open the Excel document you want to copy from. Open the Word document you are inserting in. In the Excel document, select the content you want to copy. If you want the entire page to be, select the triangle icon at the top left of your work. When the content is selected, press Ctrl+C on the keyboard (Cmd+C for Mac users) to copy it. In the Word document, place the cursor where you want to insert your work. Use Ctrl+V (Cmd+V for Mac users) to insert. You can also use copy and paste to create a new table in Word. Simply create a Word table, select the data in Excel, and then copy it directly to the new table you created. As opposed to copying and pasting paste, inserting Excel as an object inserts a thumbnail version of your Excel document in Word, complete with multiple sheets and other features. When Excel and Word are open, continue to the steps to start converting. In Word, select insert on the ribbon. Select the Insert tab and select the Object icon on the toolbar. In the dialog box, select Text from File and locate your Excel file. Update the object automatically if you change the Excel worksheet? Choose Settings &t; Link to File. Select Insert in the lower-right corner of the dialog box to place the content. Choose Insert Object &t; Object &t; Word. Under file, select the Create tab Browse. Locate the file you want to insert. Select Insert. To link it to a file, select Check box. Select OK. You can also use an online conversion form to convert Excel to Word. Find an online conversion by conducting a quick online search. Then upload your two separate documents and allow the converter to do the heavy lifting. Once the process is complete, you can download the new document. Document.
